Description of Change

The recon process is converting old water pump bodies to new water pump bodies. The customer has 4 options:

- Previously designed water pump body with duckbill
- Newly designed water pump body with duckbill and weep hole
- Optional design water pump body with weep hole to catch leakage from coolant seal
- Converted water pump body with duckbill near weep hole

There is no difference in form, fit, and function for these pumps.

Reason for Change

The water pump's design on the new model part numbers have arrangements for fitment of duckbill.

This fitment of duckbill is not present in the optional design of water pump castings. The recon salvage process is converting optional design pump bodies by machining as converted pump bodies and assembly for recon pumps.

The Cummins® Recon part number above has **not** changed but requires physical parts in kit for Water Pump Castings. Current Inbuild arrangement for duckbill fitment may visually look different depending on machining process used.

Customer Communication

There is no change to part number. This TSB is to inform the field that parts produced and sold using machining processes may look visually different (see figures below), but have the same fit and function.

Service Parts Availability

Part number has **not** changed for water pump kit. Service parts are available.

Table 1, Service Parts				
Part Description	Existing Part Number	Obsolete	Superseded	New Part Number
Water Pump Kit	437611800RX	No	No	N/A

Part Compatibility

All options are completely compatible with same fit and function. These parts are acceptable to use.
