New KV Lubrication Oil Filter Head Gasket

New KV Lubrication Oil Filter Head Gasket

Warranty Statement

The information in this document has no effect on present warranty coverage or repair practices, nor does it authorize TRP or Campaign actions.

Contents

This document announces the release of a new lubricating oil filter head gasket for use on K38, K50, QSK38, and QSK50 series engines built with inboard piston cooling nozzles. The gasket material has been changed from steel core to edge molded to increase durability and to improve engine reliability. The new edge molded gasket is used for both the inlet and outlet port connections of the lubricating oil filter head.

Engines built with outboard piston cooling nozzles can **not** use the new edge molded gasket and **must** use the old steel core gaskets for the inlet (1) and outlet (2) connections of the lubricating oil filter head. This is due to the oil supply for the outboard piston cooling nozzles coming through the outlet port of the lubricating oil filter head.

Since engines built with outboard cooling nozzles still require the steel core gaskets, they will continue to be available for service.

Use the following procedures for information on the lubricating filter head and gasket installation in the K38, K50, QSK38, and QSK50 Service Manual, Bulletin 4021528. Refer to Procedure 007-015 in Section 7. (</qs3/pubsys2/xml/en/procedures/28/28-007-015-tr.html>) Refer to Procedure 007-067 in Section 7. (</qs3/pubsys2/xml/en/procedures/28/28-007-067-tr.html>)

The effective date for implementation into production for all K38, K50, QSK38, and QSK50 engines is as follows:

Engine Plant	Implementation Date	ESN First
Daventry	18 October, 2010	33183482

Table 2: Piston Cooling Nozzle Part Numbers

		Outboard Piston Cooling Nozzles			Inboard Piston Cooling Nozzles		
Item No.	Description	Old Part Number	Material	Quantity	New Part Number	Material	Quantity
1	Gasket	3629387	Steel Core	1	3643837	Edge Molded	2
2	Gasket	3177108	Steel Core	1
