CM530 CENSE™ Module Re-Use

CM530 CENSE™ Module Re-Use

Warranty Statement

The information in this document has no effect on present warranty coverage or repair practices, nor does it authorize TRP or Campaign actions.

Contents

The flash memory and microprocessor components of the CM530 CENSE™ module have been made obsolete by the supplier, and there is no alternative. Other suppliers cannot provide the above components; therefore only a finite number are now available.

To allow the CM530 module to continue being available, the present stock of these components has been secured by Cummins Inc. However, available stocks may **not** be sufficient at the present consumption rate by production and service. As a result, the present CM530 CENSE™ module has been placed onto allocation prior to the release of the updated module, projected in mid 2014.

To minimize unnecessary replacement of the CM530 CENSE™ module, this document describes the module re-use recommendations during troubleshooting, overhaul, and re-build. All efforts should be made to reuse the existing module prior to replacement. Use the guidelines below.

Troubleshooting:

Before the CM530 CENSE™ module is replaced, calibration of the module should be attempted. If no communication can be established with the module, then replacement of the module may still be required.

Note : If the module has suffered a reoccurrence of a data corruption fault, do **not** reuse the module, e.g. if ESN, engine hour meter, fuel consumption data, etc. do **not** make sense after the module has been recalibrated and tested.

Overhaul and Rebuild:

If the module functioned adequately prior to overhaul/rebuild, the module should be calibrated and reused. If a problem is identified with the module, please troubleshoot as above.

Affected Part Numbers

Part Name	Part Number
Electronic Control Module	3098771
