Contents

This document announces the release of new Fuel Economy Optimized calibrations for QSK38/50/60 CM2150 engines powering Hitachi™ hydraulic excavators and dump trucks. These calibrations are considered non-certified and non-emissionized calibrations and have been tested showing a 4% increase (on average) in fuel economy performance, based on a typical excavator or dump truck duty cycle. This number can vary, depending on altitude, duty cycle, etc.

Current and new released calibrations (Fuel Economy Optimization) are detailed in the table below.

Note : As these Fuel Economy Optimized calibrations are classified as non-certified and non-emissionized (do not meet any certification regulations), they must not be installed on engines that will work in emissions regulated areas like North America (USA and Canada). For a Fuel Economy Optimized calibration to be downloaded to certified engines, please consult the local and national emissions regulations agencies and make sure this is in compliance with the emissions regulation laws.
