Next Generation CENSE™ Module CM2330 Bench Calibration Requirement	

Next Generation CENSE™ Module CM2330 Bench Calibration Requirement

Core Issue

The Next Generation CENSE™ Module CM2330 supplied by Cummins® distribution and dealers does **not** have the appropriate calibration installed. Self-servicing customers without INSITE™ electronic service tool with a Pro level subscription are **not** able to install the required Next Generation CENSE™ Module CM2330 calibration, which may result in extended downtime.

Confirmation

Product Affected: All High Horsepower Engines Using Next Generation CENSE™ Module CM2330

Self-servicing customers were previously able to install calibrations on new replacement CM530 CENSE™ Modules using INSITE™ for CENSE™ electronic service tool .

The Next Generation CENSE™ Module CM2330 calibration can be installed using **only** INSITE™ electronic service tool with a Pro level subscription with the standard INLINE™ adapter via the J1939 service connector socket. See TSB130133.

Resolution

Cummins® distribution and dealers should inform self-servicing customers of the requirement to have INSITE™ electronic service tool with a Pro level subscription to install calibrations on Next Generation CENSE™ Modules CM2330.

If customers do **not** have access to INSITE™ electronic service tool with a Pro level subscription, the Next Generation CENSE™ Module CM2330 calibration will need to be installed prior to the customer taking possession of Next Generation CENSE™ Module CM2330.

The Next Generation CENSE™ Module CM2330 bench calibration is possible using the engine control module (ECM) bench calibration harness, Cummins® part number 5298707. See Service Tool Instruction Number 3377791-22.
