Description of Change

Fuel economy optimized engine control module (ECM) calibrations codes are non-certified engine ECM calibration codes that can be used on Tier 2 emissions engines in regions of the world that are **not** emissions regulated. Existing fuel economy optimized ECM calibration codes were offered as "Service **Only**" and engines were calibrated by a Cummins Inc. technician in the field. Fuel economy optimized ECM calibration codes will now be available at engine plants as a first fit order option.

The fuel economy optimized ECM calibration codes are classified as non-certified and non-emissionized and do **not** meet any certification regulations). **Never** install fuel economy optimized ECM calibration codes on engines that will operate in any emissions regulated areas. For a fuel economy optimized ECM calibration code to be downloaded to certified engines, consult the local and national emissions regulations agencies to verify compliance with the emissions regulations.

Reason for Change

Fuel economy optimized ECM calibration codes effective at engine plants (able to order them first fit), rather than limiting to service **only**.

Table 1, Fuel Economy Optimized ECM Calibration Codes by Original Equipment Manufacturer

Hitachi

OEM Model	Application	Engine Model	Engine Certification Level	Engine Fuel Rating (FR)	New DO Option	New ECM Code	Old DO Option	Old ECM Code
