Cooling Fan Drive Belt Walking or Shredding

Cooling Fan Drive Belt Walking or Shredding

Warranty Statement

The information in this document has no effect on present warranty coverage or repair practices, nor does it authorize TRP or Campaign actions.

Contents

Product Affected

- QST30 CM552
- QST30 CM2350 T101

Issue

Symptom:

- Cooling fan drive belt walks on crankshaft pulley
- Cooling fan drive belt separating and/or shreds
- 10 or less hours or within the first six months in operation cooling fan drive belt malfunction occurs

Root Cause:

- High inertia fan coupled with very high deceleration rates causes the cooling fan drive belt to walk and shred.

Verification

Verify cooling fan drive belt tension and fan inertia guidelines on QuickServe™ Online (QSOL) have been followed and cooling fan drive belt is still walking.

- Increase in cooling fan drive belt tension to 575+/-50 lbs recommended for this application
- Remove existing no lip or single pulley and install double lip (flanges) crankshaft pulley. See corresponding Service Manual. Reference procedure 001-022 in Section 1. For part numbers, see Table 1 below in Service Parts Availability section.
- If needed, implement composite fan with lower inertia (3.5 kg-m2 compared to metallic fan inertia of 6.7 kg-m2).

Service Parts Availability

Service parts are available. See Table 1 for part numbers.

Table 1, Service Parts				
Part Description	Existing Part Number	Obsolete	Superseded	New Part Number
Pulley, Crankshaft	3094527	No	No	5483840

Part Compatibility

New crankshaft double lipped pulley is compatible and can interchange with option DA 5081.

Part Identification

Figure 1, Crankshaft Pulley Designs. Left: No Lip. Right: Double Lip.

Production Status

Implemented for production. See Table 2.

Table 2, Production Information		
ESN First	Build Date ¹	Plant
37276878	1 November 2018	Seymour Engine Plant
¹ Engine build date can be found on the engine dataplate.
